

## Temporal Arteritis

Temporal arteritis is a condition in which the temporal arteries, which supply blood to the head and brain, become inflamed or damaged. It is also known as cranial arteritis or giant cell arteritis (GCA). Although this condition usually occurs in the temporal arteries, it can occur in almost any medium to large artery in the body. Although the exact cause of the condition is unknown, it may be linked to the body's autoimmune response.

The symptoms of temporal arteritis can include:

- Double vision
- Sudden, permanent loss of vision in one eye
- A throbbing headache that's usually in the temples
- Fatigue and/or weakness
- Loss of appetite
- Jaw pain, which sometimes can occur with chewing
- Fever
- Unintentional weight loss
- Shoulder pain, hip pain, and stiffness
- Tenderness in the scalp and temple areas

If temporal arteritis isn't treated, serious, potentially life-threatening complications can occur. They include vision loss, eye muscle weakness, aneurysms, and stroke.

An easy way to diagnose temporal arteritis is to perform a **temporal artery biopsy**. This is done as an outpatient procedure under local anesthesia. Dr. Ashenhurst will take a small sample of the temporal artery, leaving only a small scar on your temple.

## Contact numbers

Main Office: (403) 245-3171

Surgical Center: (403) 244-2500

Dr. Ashenhurst: (403) 390-5152

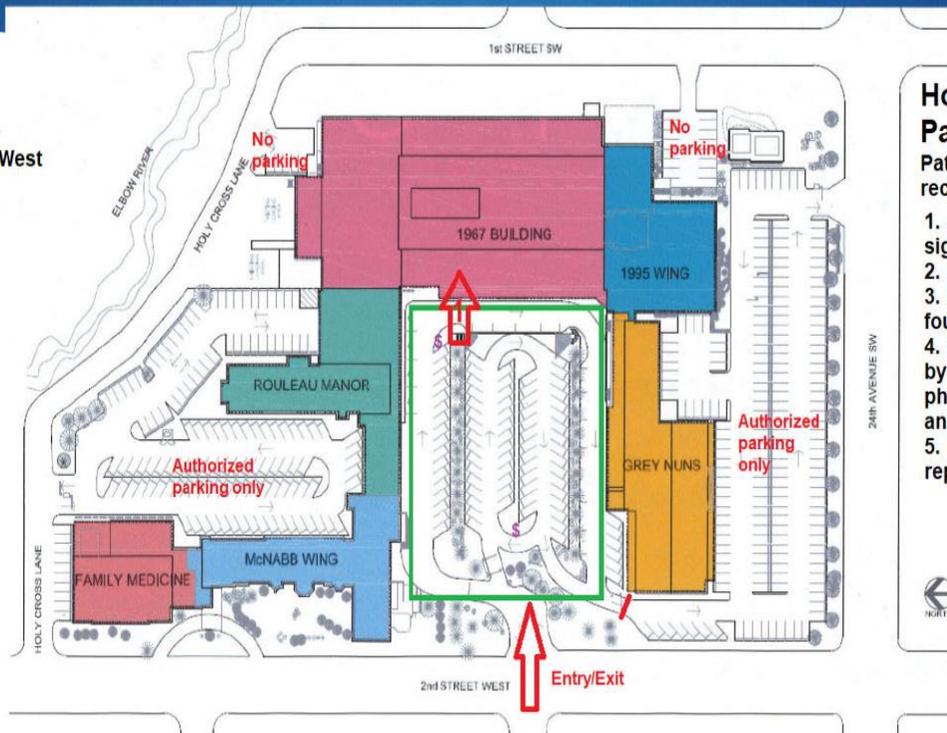

Health Link: 811

**Holy Cross Surgical Services**  
**Unit 101, 2210 2 St SW, Calgary, AB T2S 3C3**

The easiest way to get to the surgical center is to from Macleod Trail. From Macleod Trail turn west onto 25 Ave SW followed by a right turn onto 2 St sw. The Holy Cross will be on your right-hand side. There is a paid lot in the front of the building, and paid street parking can be found throughout the neighborhood. Please proceed to the first floor unit 101 to check in at the surgical desk.

## Overall Site Plan

Our address:  
2210 2nd Street SouthWest  
Suite: 101

### Holy Cross Surgical Services Patient Parking

Patient parking is marked by the green rectangle.

1. Enter off 2nd Street by the crosswalk signals.
2. Park in vacant stall.
3. Parking fees apply; payable at any of four meters onsite.
4. Enter at the "Main Entrance" (Marked by the red "1") located to the right of the pharmacy. Proceed left of AHS reception and down the hall.
5. Turn right, go past the elevators and report to reception

### Pre-Operative Instructions

- **DO NOT EAT ANY SOLID FOOD OR MILK PRODUCTS FOR A MINIMUM OF 10 HOURS PRIOR TO YOUR PROCEDURE. CLEAR FLUIDS** (apple juice, water, black tea or black coffee) **ARE ALLOWED UP TO 3 HOURS BEFORE YOUR SCHEDULED SURGERY TIME.** Gum, candy, cream, orange juice, and sugar are considered food products. You must be fasting even if we are planning to use a local anesthetic. If you eat then your surgery will be cancelled and a no show fee will apply.
- **GENERAL WARNING:** *Smoking causes poor healing and should be avoided.*

- You must not drive or take the bus from your surgery. Please arrange to have someone there to pick you up and take you home after your surgery.
- DO continue taking prescribed medications, including blood pressure pills, on the day of surgery. Diabetic medication that needs to be taken with food will need to be taken after surgery. We will arrange surgery for diabetics in the morning to ensure you are not fasting too long.
- Blood thinners (**ASA, Warfarin, Pradaxa, Xarelto**) are usually discontinued 1 week prior to surgery – please contact your prescribing doctor to make a specialized plan for you. Other blood thinners such as **Vitamin E, Ginko Biloba, ginger, garlic, Advil, Motrin, Naproxen,** and **green tea** need to be discontinued a week prior to surgery.  
Note: Tylenol is NOT a blood thinner and can be taken as needed pre-operatively.
- Please remove ALL make-up and arrive with a clean face on the day of surgery. It is best to wash your face with soap on the day of surgery. It is OK to apply a light moisturizer.
- You will not be changing into a robe, so please wear something you are comfortable laying down in.

### Post-operative instructions

- Although it is a minor procedure, you must take it easy for the next week. No bending, or strenuous activity. You cannot lift over 10 pounds.
- Polysporin or Ciloxan Ointment must be applied to the incision 2-3 times daily for 2 weeks.
- Ice (or frozen peas) 10 minutes on and 10 minutes off. Continue for two days, while you are awake. Do not leave ice on for any longer than 15 minutes, as this will freeze the skin.
- You can take Advil and Tylenol (as per manufacturer's instructions) for pain if needed.
- After 48 hours you can cleanse any crusting away from the incision with baby shampoo.
- You may shower the following day so long as you are careful to not get shampoos into the incision, or excessive water.

### WHAT IS NOT NORMAL AFTER SURGERY:

- Fever
- Uncontrolled swelling, bruising, pain, and loss of vision are a medical emergency. If this happens contact Dr. Ashenhurst's office immediately or go to an emergency room.
- Excessive bleeding is rare. If you should experience excessive bleeding, apply pressure on the wound with ice packs. Lie quietly with your head elevated. Go to the nearest emergency room or contact Dr. Ashenhurst's office if bleeding is uncontrolled.

After regular office hours you can contact Dr. Ashenhurst directly at (403) 390-5152.
